

## Bedroom window A/C's at Maui Vista

Agreeing to enact the motion will require removal of all window mounted A/C units by the walkway. Any replacement A/C by the walkway would have to be internal. According to my research, internal A/C's are not as effective or energy efficient at cooling compared to window mounted A/C's.

**Effectiveness:** A recent review by consumer reports tested eight internal air conditioners costing between \$250 and \$500. At 90 degrees F and 70% humidity outdoors, none of the units cooled the room down to 80 degrees after one hour and 40 minutes of continuous running. Here is a link to a one minute video. <http://www.consumerreports.org/cro/news/2014/06/are-portableair-conditioner-claims-a-lot-of-hot-air/index.htm>

**Energy Efficiency:** In addition to portable units not being as effective, they are also 30% less energy efficient. This is due to the entire machine being indoors. Here is some information I found on that: <http://homeenergypros.lbl.gov/profiles/blogs/warnings-about-portable-air-conditioners>
